MS-200

Surface Tension Reducer

MS-200 is designed and formulated to enhance the recovery of stimulation fluids by reducing surface tension and aiding in the clean-up of water based frac fluids and acidizing fluids.

MS-200 is a non-ionic/anionic fluid that is very versatile and compatible with many of the various stimulation fluids used in the oil and gas industry. It is used in fracturing fluids as well as hydrochloric acid with little to no degradation to product after exposure to heat and extreme cold.

MS-200 delivers superior water wetting characteristics in both carbonate and sandstone reservoirs. The result is a more efficient stimulation, with residual wetting, that enhances the performance and life of an oil or gas well and its longevity.

MS-200 is used as a non-acidic breakdown fluid to enhance stimulation performance at a loading of .5 to 2 gpt.

Specific Gravity:	0.95-1.05
Appearance/Odor:	Clear to Amber/ Pleasant
pH:	6.0-8.0

See SDS

MS-200 is recommended at a loading of .5 to 2 gpt in fracturing fluids and acidizing fluids. It is suggested to always run a compatibility of fluids.

MS-200 is available in 55 gallon drums, 275 and 330 gallon totes.
